

LOC-AI: The Ultimate Developer's Companion

Official User Guide & Documentation Version: 1.0.0 (Master Build)

Developer: Lochana Chamod

Contact: lochanachamod3@gmail.com

1. Introduction

LOC-AI is a professional-grade, dual-engine AI coding assistant designed to run directly on your desktop. It offers two distinct modes:

-  **BUNKER MODE (Offline):** Secure, private, and runs entirely on your local hardware using the Ollama engine. No internet required.
-  **GOD MODE (Online):** Connects to the ultra-fast Groq Cloud API (Llama-3.3-70B) for complex reasoning and high-speed architecture planning.

2. Installation Guide

Send these instructions to your users.

Step 1: Install the App

1. Download the installer file: **LOC-AI Setup 1.0.0.exe**.
2. Double-click to run it.
3. If Windows shows a "Protected your PC" warning (common for new indie apps), click **"More Info"** -> **"Run Anyway"**.
4. When asked, select **"Install for Anyone who uses this computer (All Users)"**.
5. Launch LOC-AI from your Desktop shortcut.

Step 2: Activate Offline Brain (Required for Bunker Mode) LOC-AI needs a "Brain" to function offline.

1. Download **Ollama** from ollama.com.
2. Install it.
3. Open your Command Prompt (cmd) or Terminal.
4. Run this exact command to download the coding model:

ollama run qwen2.5-coder:1.5b

5. Done! Bunker Mode is now active.

Step 3: Activate Online Brain (Required for God Mode)

1. Open LOC-AI.
2. Click the " ⚡ **GOD MODE**" button in the sidebar.
3. Click the " ⚙️ **SETTINGS**" button.
4. Enter your Groq API Key.
 - *get your own free key at: console.groq.com*
5. Click **SAVE CONFIGURATION**.

3. Features & Usage

Smart Chat & Memory

- LOC-AI remembers the last 6 messages of your conversation, allowing for natural, continuous dialogue.
- **Sidebar History:** Click on any past chat in the sidebar to instantly reload that session.
- **Delete:** Hover over any chat in the sidebar and click the **Trash Bin** 🗑️ icon to delete it permanently.

Project Vision (File Analysis)

- **Drag & Drop:** Drag any code file (.py, .js, .html, .txt) directly onto the app window.
- **Blue Chip:** A blue tag will appear showing the file is attached.
- **Analyze:** Type your question (e.g., "Find the bug in this file") and hit Enter. The AI will read the file and fix it.

Cyber-Glass Interface

- Enjoy a distraction-free, high-contrast dark mode designed for late-night coding sessions.
- Code blocks feature syntax highlighting and a one-click **"COPY"** button.

5. Support

For bug reports, feature requests, or business inquiries, please contact the lead developer:
